

<p style="text-align: center;">Project Title</p> <p style="text-align: center;">Finnigan Raines, Hermosa Middle School, Farmington, NM</p>		<p style="text-align: center;">Project ID#</p>
<p>Wether or not microwaved water kills plants</p>	<p>The research and procedures showed that microwaved water does not kill plants, and that distilled water grows best.</p>	
<p>Add potting soil, 12 pinto beans spaced out evenly, place in a sunny area, and label each planter, water beans with desired water, and repeat until germination. Take pictures and measurements. Once done, present the data.</p>	<p>My hypotheses was supported because the plants grew mostly the same. There were no major differences in the growth. There was an 11% difference in the largest to smallest.</p>
